

## REF P92 ROLL OUT PHOSPHOR BRONZE PISTE

These phosphor bronze pistes are made with unique plastic coated edges. —▶

The plastic layer prevents damage and fraying which can occur easily to an unprotected edge. It also helps to prevent the piste from curling up at the edges during use. As most pistes eventually fail from tears at the edges the extra cost of the plastic edging reflected in the overall price leads to a long term saving.

These pistes are ideal for taping to any hard surface and can also be mounted on above or below floor roller systems for easy storage.

Weight of piste 55 Kilos

Supplied in super strong cardboard tube suitable for storage and transport.
